JOHN DOE

San Francisco, CA john.doe@gmail.com github.com/johndoe99 johndoe.dev

Summary

Front-End Engineer experienced in building polished, production-ready web applications with **React, Next.js, and TypeScript**. Strong track record of turning product requirements and Figma designs into responsive interfaces, building reusable component systems, and connecting complex front ends to APIs and third-party services.

Technical Skills

Languages: TypeScript, JavaScript, SQL, HTML, CSS
Frontend: React, Next.js, Tailwind CSS, shadcn/ui, TanStack Query, TanStack Table, Zustand, Lucide React
Backend: Node.js, PostgreSQL, REST APIs, Axios, Redis, Clerk, Stripe
Tools: Git, GitHub Actions, Vitest, React Testing Library, Sentry, PostHog, Figma

Professional Experience

Orbit Commerce New York, NY
Front-End Engineer Mar 2024 – Present

- Developed and shipped customer-facing features for a **Next.js and TypeScript** commerce platform, including analytics, catalog management, checkout, and account workflows serving 12,000+ monthly users.
- Partnered directly with product and design to turn **Figma specifications into responsive, production-grade UI**, creating reusable components with Tailwind CSS and shadcn/ui.
- Built API-driven dashboards with **TanStack Query and TanStack Table**, adding caching, filtering, pagination, optimistic mutations, and typed error handling for high-volume data views.

Brightstack Software Seattle, WA
Software Engineer Jul 2022 – Feb 2024

- Built and maintained React applications for an early-stage SaaS product, contributing across **frontend architecture, API integration, testing, and deployment** in a small engineering team.
- Implemented a shared **component library and design system** from Figma, reducing repeated UI work across multiple product areas and improving visual consistency.
- Integrated authentication, billing, and third-party APIs using **Clerk, Stripe, Axios, and REST services**, while introducing automated checks through GitHub Actions.

Projects

MetricBoard Live · GitHub

- Built a **real-time analytics dashboard** with KPI cards, charts, searchable tables, date filters, and configurable dashboard layouts using Next.js and TypeScript.
- Implemented server-state management with **TanStack Query**, including request deduplication, caching, refetching, and optimistic updates.
- Designed reusable UI primitives with **shadcn/ui, Tailwind CSS, and Lucide React**, with responsive layouts and accessible interaction states.

Subscribely Live · GitHub

- Created a subscription management application with **plans, checkout, customer portals, usage limits, and feature-gated experiences**.
- Integrated **Stripe and Clerk** with Next.js API routes, handling authentication, subscription state, webhook-driven updates, and failure states.
- Built the complete interface from **Figma designs**, using reusable React components and responsive Tailwind layouts across desktop and mobile.

Education

B.S. in Computer Science, University of Washington 2022
Relevant Coursework: Data Structures, Databases, Human-Computer Interaction, Software Engineering
